Summary:

I am a computer science graduate seeking a full-time software development position to gain valuable work experience.

Education:

Illinois Institute of Technology
B.S. Computer Science
May 2019
Recipient of Heald Scholarship

Professional Experience:

Fermilab www.fnal.gov
Internship June 2018 – August 2018

- Designed an image/information displaying GUI application
- Independently learned Qt creator IDE and Qt libraries
- Implemented several C++/Qt classes
- Debugged code using Qt IDE debugger
- Created a user interface capable of parsing XML files
- Presented project to Mu2e group of engineers and physicists

Varosha www.varosha.org
Webmaster May 2017 - Present

- Redesigned website working with directors of the organization
- Set up payment system for online donation
- Built off of pre-existing css to add more pages to the website
- Delivered requested updates on a regular basis while maintaining constant contact with clients

Skills:

- Unity (self-taught, self-directed projects)
- C# (self-taught, self-directed projects)
- Linux C/C++ (CS 350 Computer Organization and Assembly Language Programming, Fermilab project)
- Designing user interfaces with Qt development tools (self-taught, Fermilab project)
- Java (CS 115 Object Oriented Programming, self-directed projects)
- Javascript, WebGL (CS 411 Computer Graphics)
- Python (CS 330 Discrete Structures)
- HTML, PHP, and CSS (self-taught, Varosha project)
- Low-level computer graphics relating to spline interpolation, 3D anti-alias shading, bump mapping, and texture mapping (CS 411 Computer Graphics)
- Extensive experience working with android studio to develop apps (CS 442 Mobile App Development)
- Operating systems programming (CS 450 Operating Systems)
- Data structure and traversal algorithms (CS430 Introduction to Algorithms)

Projects

Unity Tutorial Projects
Personal Project (Unity/C#) March 2019
- Designed games using premade assets
- Wrote scripts from scratch in Visual Studios
- Learned the fundamentals of prefabs and components

C++ Game Simulator
Personal Project (C++) July 2019
- Read information from files
- Calculated results produced by pseudo random number generator
- Implemented analysis mode that runs the game 1000000 times and calculates the average result

Malloc
Operating Systems Class Project (C) November 2017
- Created a memory allocator designed to quickly allocate memory while maintaining proper memory utilization efficiency
- Implemented a pseudo-cache linked list which made the memory allocator outperform the Linux OS built in memory allocator in some scenarios

Temperature Conversion App
Android Mobile Applications Class Project (Java) February 2018
- Created an android app capable of converting between Fahrenheit, Celsius, and Kelvin
- Designed vertical and horizontal layout

Fermilab UI
Fermilab Internship Project (C++) July - August 2018
- Learned how create UI using Qt development environment
- Divided the project into manageable modules and delivered the final product on schedule

Personal:

- US Citizen (Eligible for security clearance)
- Proficient with photo editing software such as Photoshop
